Executive Information Software	✓	✓
PBX Telephone Interface		✓
PCS Wireless Phones		✓
Radio Pocket Page	✓	✓
Resident Check-In		✓
Resident Information Display	✓	✓
Wireless Pendant		✓

EXECUTIVE INFORMATION SOFTWARE

The Executive Information Software is a Windows®-based software package that generates reports and archives records on all Jeron Nurse Call activity within a facility including liability management reports, workload levels, and performance records.

PBX TELEPHONE INTERFACE

Using a dedicated interface terminal, PBX Telephone Interface enables staff to provide timely, efficient response to patient calls while remaining mobile by effectively turning every telephone on the premises into a remote Nurse Master.

PCS WIRELESS PHONES

Integration with a wide variety of wireless PCS telephone systems offer caregivers another option for immediate communication with patients and colleagues. The overlapping cell strategy increases the range of mobility, flexibility, and efficiency within the communications grid.

RADIO POCKET PAGE

Alphanumeric Radio Pocket Page is available to enable caregivers to receive messages instantly and silently from anywhere in a facility without the use of overhead paging systems. These pagers will display room number, bed designation, call type, and time of call.

RESIDENT CHECK-IN

The Resident Check-In option provides management with a fully automatic check-in procedure for each tenant. Indicator lights flash on designated room stations at a preprogrammed time, prompting residents to "check-in" by depressing the station's button. Stations that fail to check-in are displayed on the console.

RESIDENT INFORMATION DISPLAY

Resident Information Display is a computer-based data management program, providing automatic, real time display of personal medical information for the resident or patient placing a call on the Jeron Nurse Call System. Information displayed includes the caller's name, location, duration of the call, family contact, medical data, etc.

WIRELESS PENDANT

A wireless call option includes a Wireless Pendant that ensures residents that they can get assistance with the touch of a button. If a resident needs help for any reason, they simply press the button on the pendant to instantly call the appropriate staff. The system displays the room number and message at the console.

Connecting Caregivers With Integrated Technology

AT THE FOREFRONT OF THE HEALTHCARE *COMMUNICATIONS* REVOLUTION
